Milestone 3 - Project Timeline (Update as we go)

Tasks to do:
- Set up database using MySQL along with javascript and node.js
    - Back-up - use of JDBC & PHP
- Project Check In - Friday 10PM
    - Update documents and provide timeline to project outlook
    - Start project code implementation after confirmation of timeline planning - Thursday Jul 28 2022
    - Set up Front End - React / JavaScript
        - Home page (Welcome page)
        - Inventory UI
            - Manager Display
            - Worker Display
            - Driver Display
        - Order UI - Make orders
    - Set up Back End - MySQL / node.js
        - Setup backend logic to connect mySQL database with nodeJS
        - Create simple CRUD API for SQL query for Frontend
- Project Implementation - Due Aug 9 - 10PM
    - SQL script to create all tables and data in database
    - Project description
    - README.txt
    - Queries: INSERT Operation
    - Queries: DELETE Operation
    - Queries: UPDATE Operation
        - Insert / delete / update - aim to complete by Aug 2nd
    - Queries: Selection
    - Queries: Projection
    - Queries: Join
    - Queries: Aggregation with Group By
    - Queries: Aggregation with Having
    - Queries: Nested Aggregation with Group By
    - Queries: Division
        - Rest aim to complete by Aug 7th
    - Debug and finish implementation before deadline
- Group Demo - Due Aug 11 - 10PM
    - GUI - must be done, basics such as buttons to run a query is adequate
- Individual and Peer Assessment - Due Aug 11 - 10 pm

Questions for Unma?
- How extensive do our CRUD APIs need to be?
